

Final Presentation

Desktop AI-Powered Payroll Management System with Salary Prediction
Presented by: Lovepreet Balhotra

Problem Statement

Manual payroll is time-consuming, error-prone, and inefficient.

Objectives

- Automate payroll
- Manage employee data
- Predict future salaries using AI
- Generate reports and payslips

System Modules

Employee Management

Attendance

Payroll

Tax & Deductions

AI Salary Prediction

Reports

Technology Stack

Python, Tkinter, SQLite/MySQL, Pandas, NumPy, Scikit-learn

AI Model

Regression model trained on historical payroll data to predict salary trends.

Results

Accurate payroll calculation, automated reports, salary prediction, improved efficiency.

Conclusion

The project reduces payroll errors, saves time, and supports HR decision-making with AI.

Thank You
