Introduction

An AI-enabled desktop payroll application that automates salary processing, deductions, attendance integration, payslip generation, and salary prediction.

Problem Statement

Manual payroll processing is slow, error-prone, and difficult to scale.

Objectives

Automate payroll, improve accuracy, reduce processing time, and predict future salaries using machine learning.

System Modules

Employee Management
Attendance
Payroll Processing
Tax & Deductions
Reports
AI Salary Prediction

Technology Stack

Python, Tkinter, SQLite/MySQL, Pandas, NumPy, Scikit-learn, Matplotlib.

AI Model

Regression algorithm trained on employee salary history, attendance, experience, designation, and performance.

Testing & Results

Successful payroll generation, accurate calculations, reduced manual effort, and effective salary prediction.

Conclusion

The project demonstrates how AI enhances payroll management through automation and predictive analytics.

Future Scope

Cloud deployment, biometric attendance, mobile app, HR analytics dashboard, and deep learning models.

Thank You
